## 1. Description

### Powered Wing

The base model includes 1 skydiver and 2 canopy colors to choose from.

Both exterior models and interior models are in high quality. FS lowers the quality in the external views. Best viewed in VC mode.

### MODELS:

Powered wing

### SCENERY:

Scenery Included KCDK Lewis

## 2. Install

Double Click the yellow piper exe.  
Have your registration code copied into your mouse. This will input your code automatically.

Choose what Windows operating system you use.  
Accept the license agreement and input your name in the name box and click next. The directory should be correct.  
Or you can point the directory to your Sim.

**Our models are located under Flysimware as the manufacturer.**

The scenery is also installed during this process. No library setup required.

Just go to Lewis Airport KCDK located in Florida USA. Aircraft will show under Flysimware as the manufacturer.

---

### 3. Instructions

1. Fly any aircraft to where you want to start skydiving. Then change from your aircraft to the skydiver and you will start to fall. Use the spoiler for speeds between 0-6 knots. When your ready to deploy your chute release the spoiler and click your flaps once for first stage and click the flaps again for the chute is fully deployed. If you click the flaps a third time you will get more drag, used when landing.
2. Besides the flaps and spoiler there is the tail hook for viewing the watch on left arm. The letter "I" on your keyboard is for red smoke. Shift 1 and 2 are for your

2D panels.

3. Let's review the keys you have to remember. Spoiler, Flaps, Tail hook and Smoke system.

Here is a list of all functions and controls: Use keys or use the panels!

NOTE: FSX users you must hold starter button for 15 seconds or until the light enables.

Flaps (Deploy Chute / Open Chute / Lift-Extend Arms)

Spoiler (Drag 0-6 Knots / Use before chute deployment)

Shift E (Visor)

Tail hook (Animated Left Arm View Watch)

I (Red Smoke Trail)

Trim (Maintain Pitch)

Shift 1 (Watch Ground Altimeter) 2D

Shift 2 (GPS) 2D

Mouse over Watch (Ground Alt in Meters) Standard is in Feet.

Ground Altimeter turns red at 1,000 AGL.

#### 4. Remove Product

1. The uninstaller is located under "Start" / "Control Panel" / "Programs and Features". Product version is listed here and the installer file name.
